Build Better with ProjectSight

Take command of projects with actionable data and powerful collaboration.

Trimble® ProjectSight™ is a construction project management software that empowers construction teams to build better with powerful drawing, document, financial and field management capabilities. Leverage leading-edge project management software to make better, faster decisions—boosting your ability to complete projects on time and on budget.

The ProjectSight Difference

Integrations backed by Trimble end-to-end

- Avoid costly surprises with integrations to Viewpoint® Vista and Spectrum. Get up-to-the-hour job costs and see the impact of changes while accounting maintains financial control.

Adaptable workflows, protected data

- Tailor ProjectSight to match your team's existing processes, rather than forcing them to adapt. With industry-leading customizable security roles, you're in control over how work is done and who has access to project data.

Unlock constructible models

- Empower field teams with the power of BIM. ProjectSight delivers high fidelity 3D models that can be used by construction or fabrication teams. Backed by Trimble Connect®, ProjectSight unlocks seamless workflows with scanning solutions.

DATASHEET

Build Better with ProjectSight

Take command of projects with actionable data and powerful collaboration.

Explore the Benefits of ProjectSight

Connected teams, maximum efficiency

Seamlessly connect the office and jobsite with an easy-to-use mobile application. Now field teams have access to the information they need to build accurately and get more done—even when offline. With safety notices, checklists, daily reports, punch items and drawings, it's easy to track progress with ProjectSight.

Protect profitability

Safeguard profit margins with complete visibility into project changes, purchase orders, costs and budgets. Identify and evaluate the impact of changes with an end-to-end change order workflow—from identification in the field through approval, execution and billing. With decades of experience in construction budget and cost management, ProjectSight helps you get ahead of financial risk.

Leverage the power of Trimble's ecosystem

Boost team productivity and reduce errors with connected Trimble workflows across accounting, BIM, fabrication, estimating and reality capture. ProjectSight unifies back office, design, operations and field teams through powerful integrations with Viewpoint Vista, Spectrum, Trimble Connect and more Trimble solutions.

Get control of project documents

Stop searching through multiple systems for answers. Capture, organize and share project records with internal and external teams. Now drawings, submittals, RFIs, specs, photos and more are centralized and easy to manage. With ProjectSight, assignments and audit trails are clear and time-stamped to ensure clarity and collaboration.

Don't let outdated processes hold you back.
